ROUTE RISK REPORTS

Route Risk Reports

Clearwater Dynamics Route Risk Reports (RRRs) provide a clear overview of the latest incidents posing a potential security risk relevant to a vessels imminent voyage.

Improve domain awareness

Accurate and factual information produced by Clearwater's intelligence services is trusted by Government Navies and industry governing authorities. Utilising this information to generate RRRs enhances domain awareness for ship masters and CSOs, facilitating risk mitigation for each voyage.

How does it work?

STEP 1

Vessel Master sends an email to Clearwater with notification of intended voyage and provides route waypoints from ECDIS

STEP 2

Provided route is uploaded to the Clearwater Web Portal by an Operations Officer

STEP 3

Clearwater Operations Officer analyses the planned route for any recent and geographically relevant security incidents

STEP 4

Completed analyses provided via Route Risk Report in PDF format sent to vessel Master and CSO
